Noodle Foodle Re-design

Link to original noodle foodle website
http://www.noodlefoodle.co.uk/

My project

- Based on re-designing the Noodle Foodle website
- This is a small local Japanese restaurant

Research

SUSHI & SASHIMI

Maki Sushi

Cucumber Hosomaki / 6Pcs (V)	£2.90
Salmon Hosomaki / 6Pcs	£3.30
Tuna Hosomaki / 6Pcs	£4.30
Avocado & Asparagus Hosomaki / 6Pcs (V)	£4.30
Spicy Tuna Roll / 8Pcs	£5.30
California Roll/8Pcs *cucumber, avocado,crabstic*	£4.30
Salmon Avocado Roll / 8Pcs	£5.20
Philadelphia Roll / 8Pcs *Fresh salmon, cream cheese, avocado and cucumber topped with tobiko*	£5.70
Tuna Avocado Combi Roll / 8Pcs	£7.90
Prawn Avocado Combi Roll / 8Pcs	£7.90
Unagi Avocado Combi Roll / 8Pcs *B.B.Q Grilled eel,avocado cucumber*	£7.90
Spicy Tuna Tempura Roll / 8Pcs *Fresh Tuna fried in a light Crisp batter with fresh avocado and crabstick*	£7.90
Spicy Salmon Tempura Roll / 8Pcs	£7.50
Vegetable Tempura Roll / 8Pcs (V)	£6.50
Chicken Teriyaki Roll /8Pcs	£7.50
Salmon Teriyaki Roll /8Pcs	£8.50

	8pcs	4pcs
Dragon Roll *An inside out sesame coated roll filled, ripe avocado and topped with teriyaki eel*	£11.00	£5.90
Dynamite Roll *Spicy tuna and salmon,white fish with tobikos*	£11.00	£5.90
Soft Shell Roll *Fried Soft Shell Crab, Crab Meat, Cucumber and avocado*	£11.00	£5.90

Wakame Salad (V) *Japanese seaweed*	£3.90
Salmon Avocado Salad *with Japanese dressing*	£5.90
Gyoza Chicken 5pcs Prawn 5pcs Yasai 5pcs (V)	£3.90

- Whats wrong?
  - Lack of content
  - Lack of interactivity
  - Irrelevant (browser provided majority of information on the website)
  - Amateur aesthetics and pre-dated
  - Not dynamic (menu is a PDF file probably photos to change or edit an item will be long process)
  - Menu very hard to read and understand

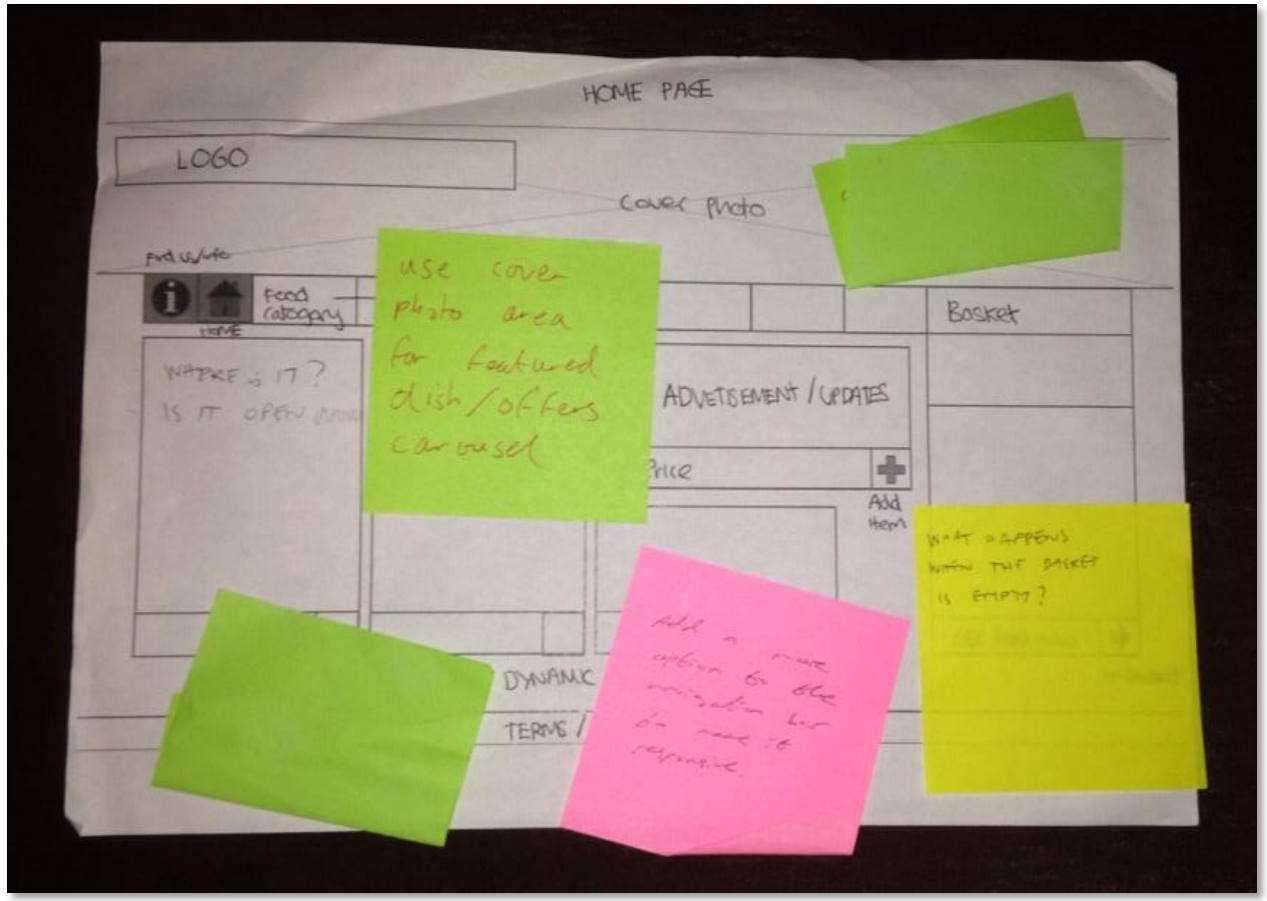
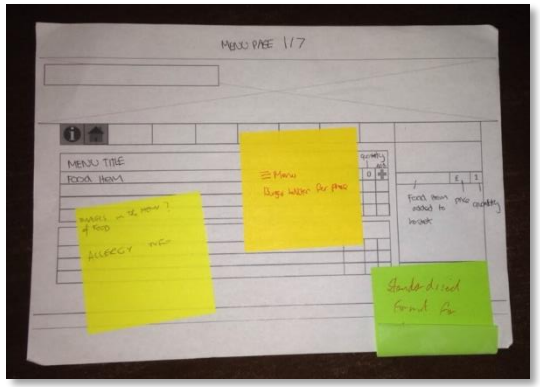
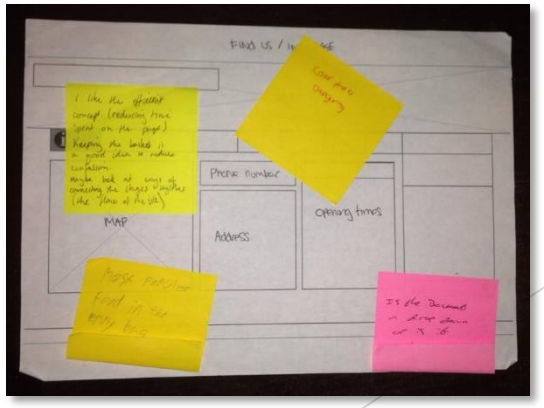
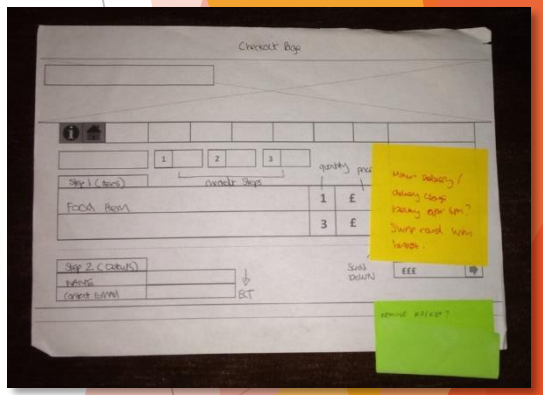
The process (Paper wireframes)





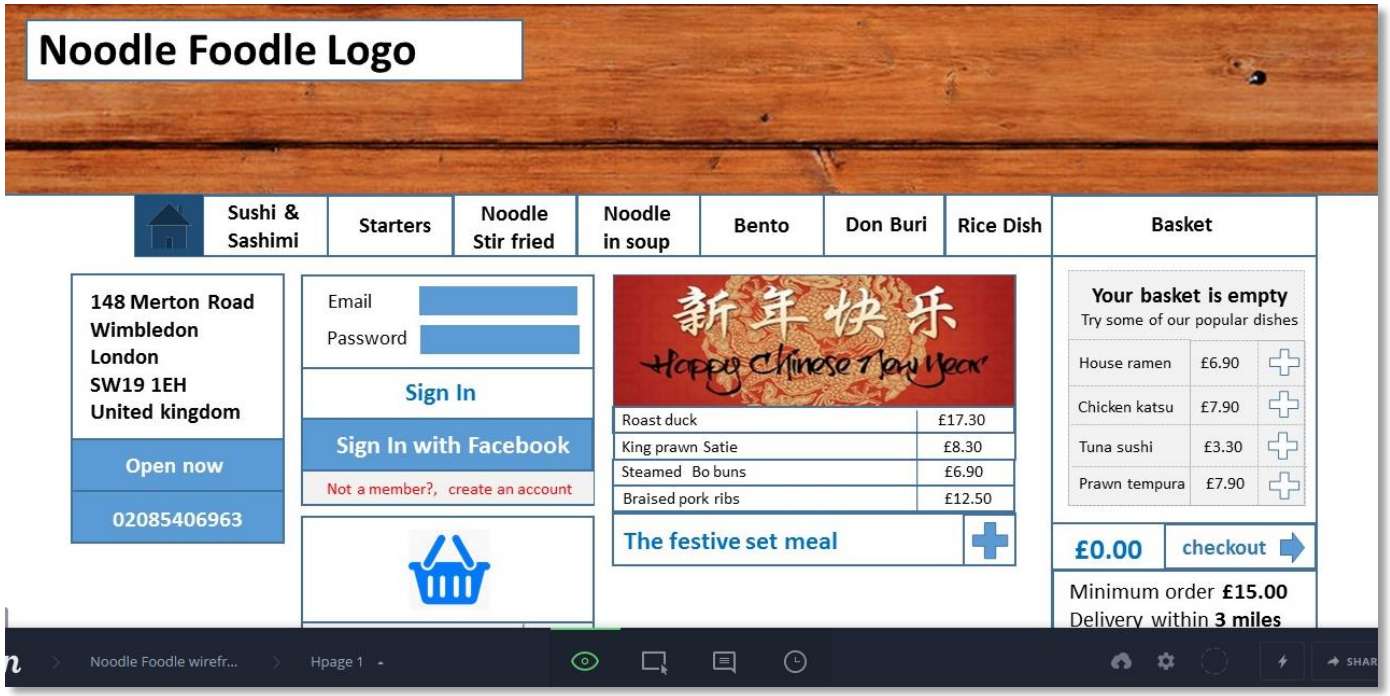


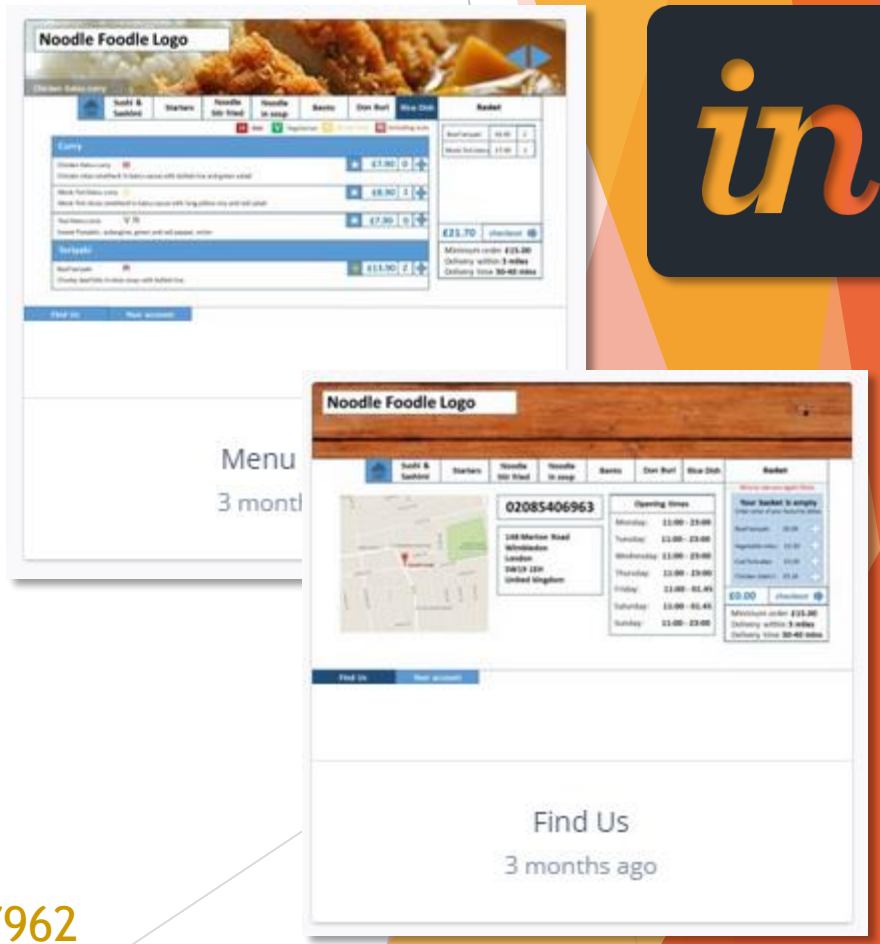


Paper wireframes, that were given feedback for development

The process (Digital Wireframes)

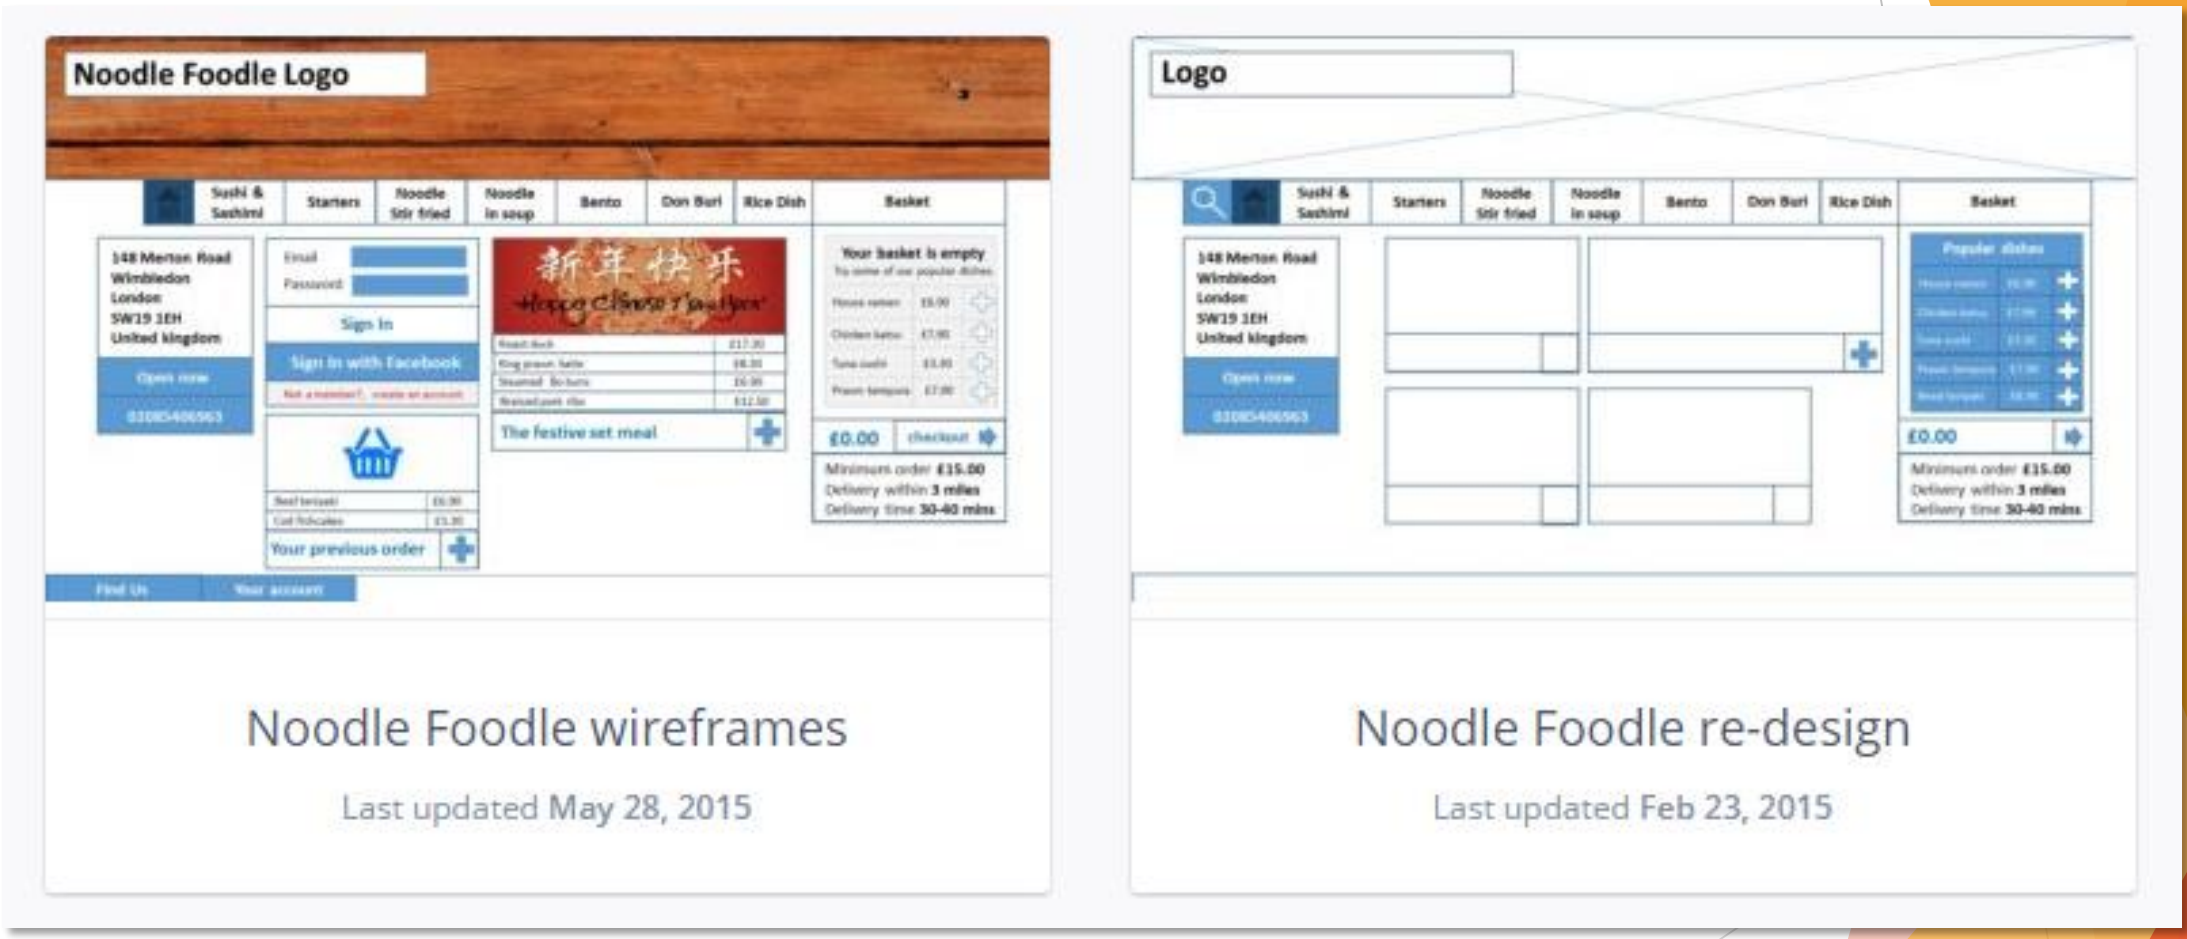
Took wireframes onto Invision , a digital platform to simulate my website





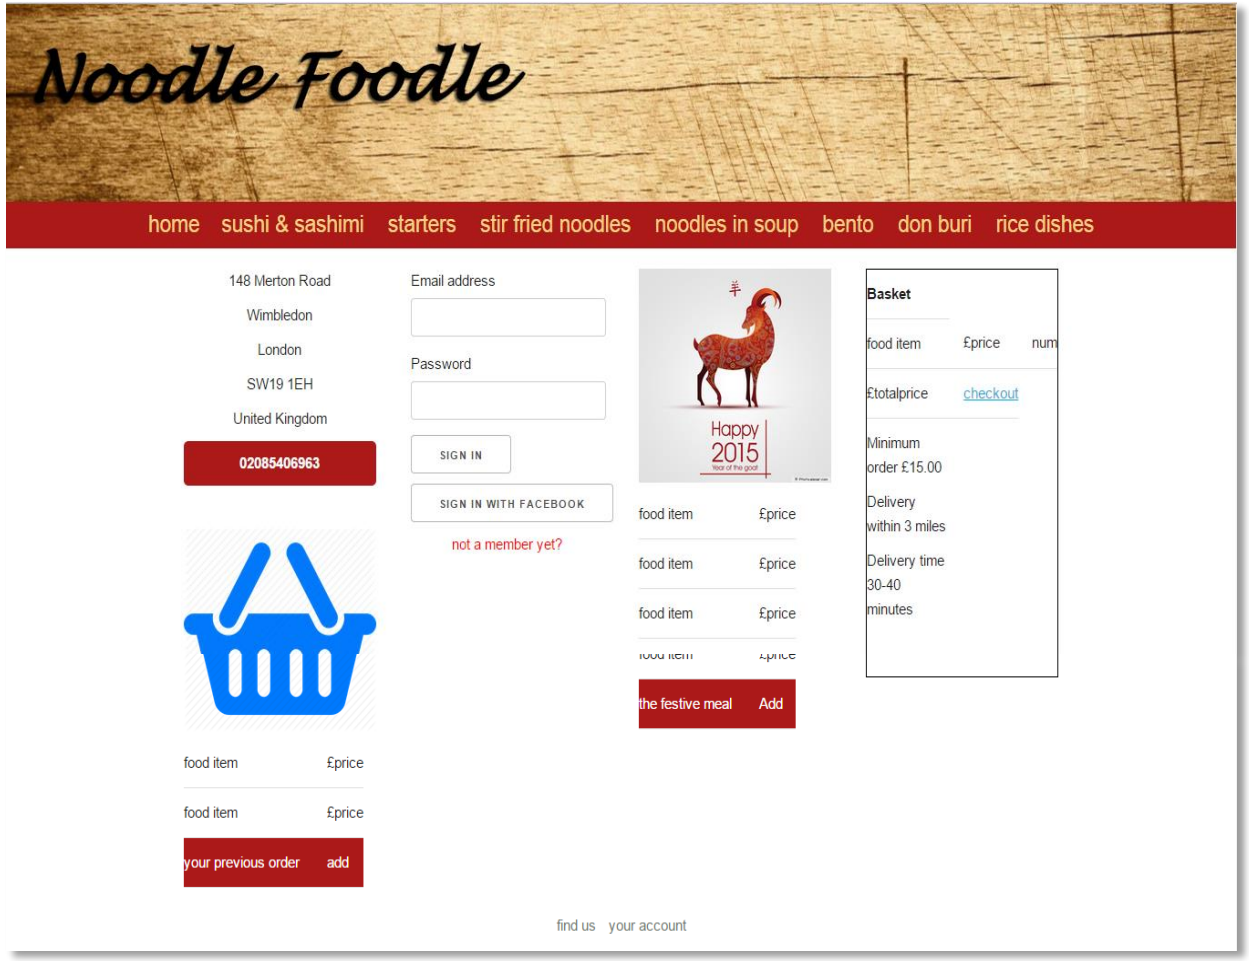
Link to digital in vision wireframes:
https://projects.invisionapp.com/d/main#/projects/2997962

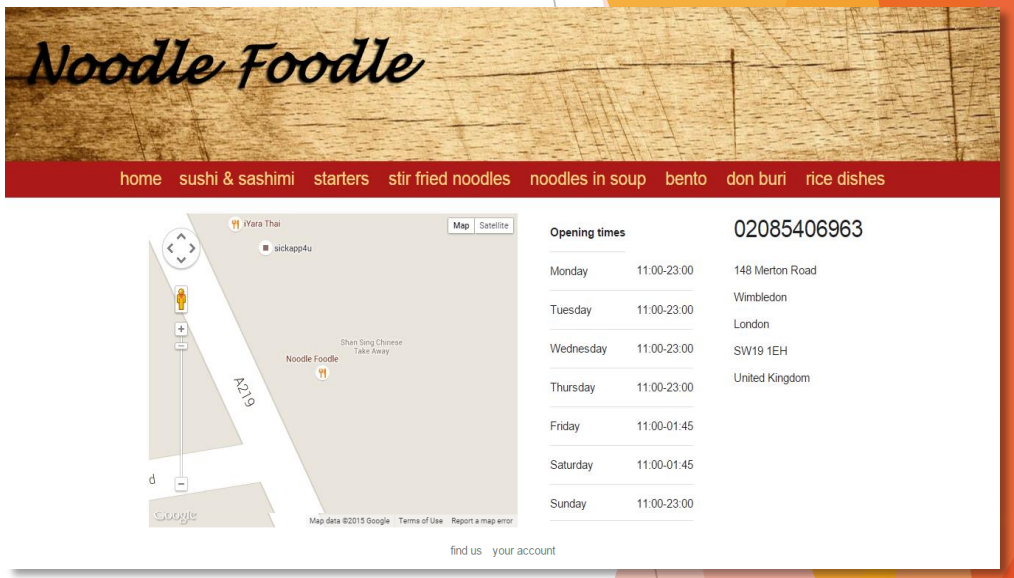
The process (Digital Wireframes)



Developed from “bullshit wireframe” to a more accurate and helpful one. Found it great to use as a guide during construction.

The process (HTML + CSS)



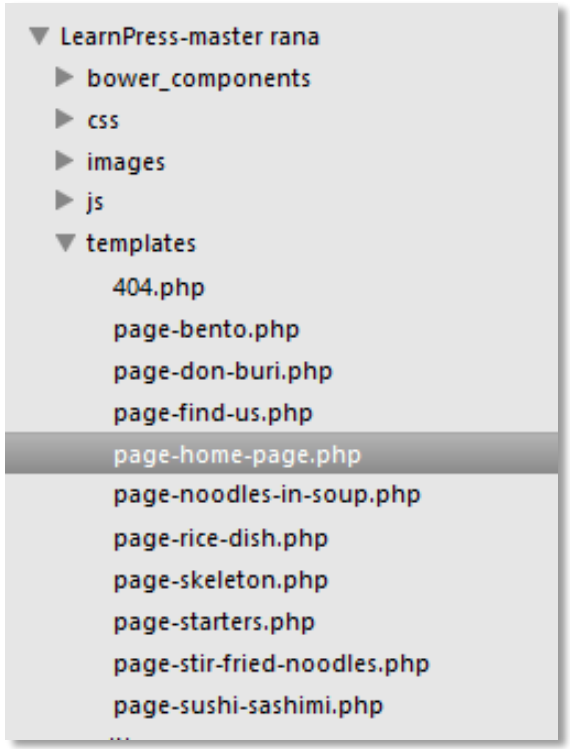


- Developing locally
- Using skeleton to structure pages
- Before WordPress installations

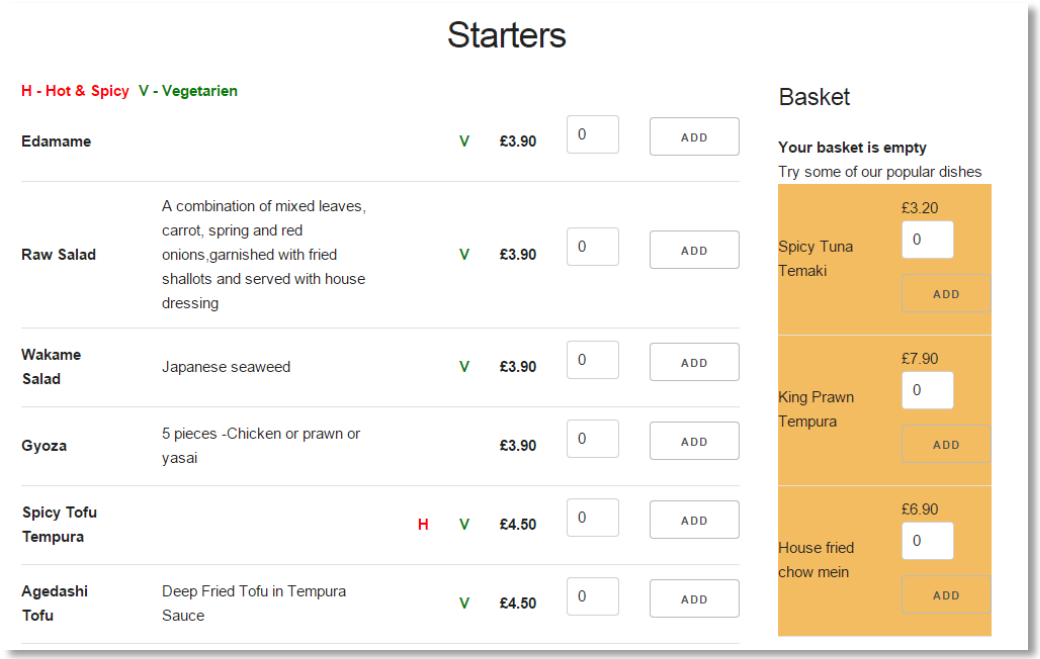
The process (WordPress templates)

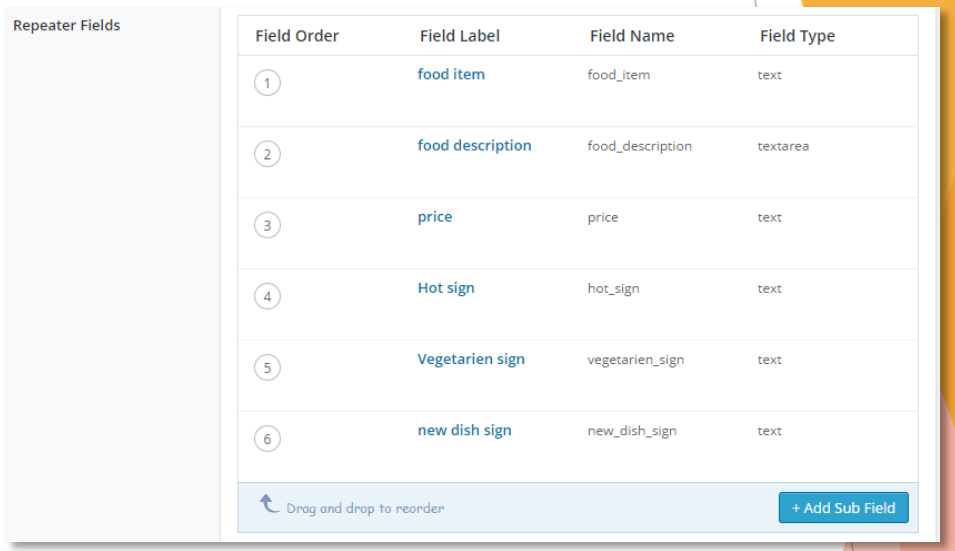
- Moved onto installing and developing on WordPress locally and started tempting
- Allot was pulled over from my HTML wireframes.
- Threw php into the mix and used advanced custom fields to make parts dynamic

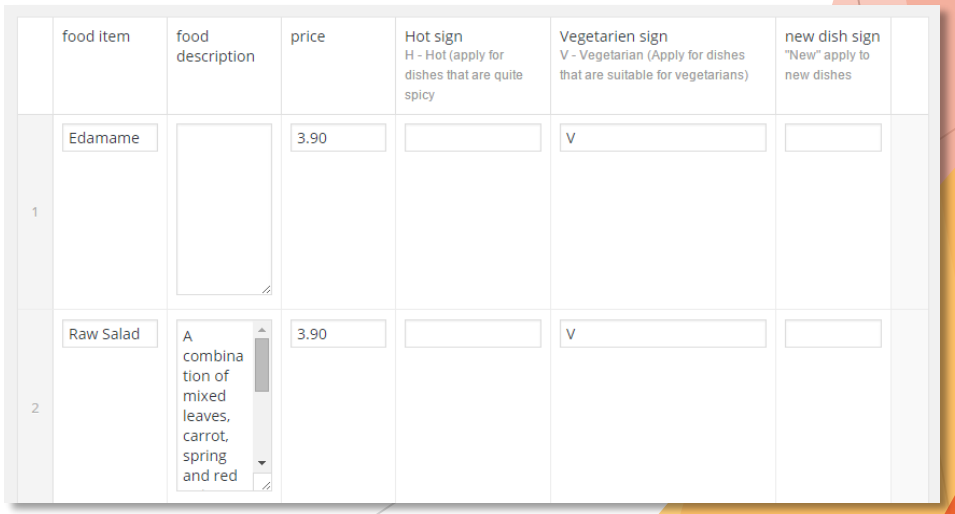
```php
<?php
/**
 * Template Name: home page
 *
 *  This is an example using Skeleton
 *
 */
?>
```



The process (WordPress templates)





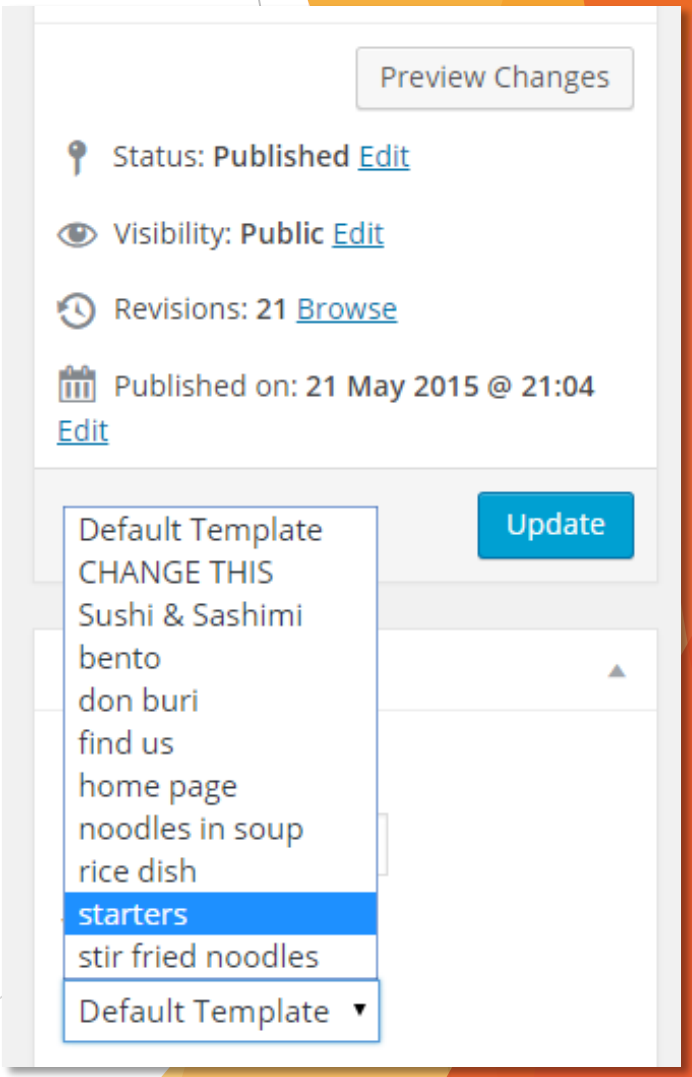


- Allot of my pages are menu pages
- Their all quite similar
- I used repeater fields
- This Is how it would be laid out

The process (WordPress templates)

```
38
39    <!-- PHP loop through the repeater -->
40
41        <?php
42
43    // check if the repeater field has rows of data
44    if( have_rows('starters') ):
45
46      // loop through the rows of data
47        while ( have_rows('starters') ) : the_row();
48
49        ?>
50
51            <!--display a sub field value-->
52
53        <tr>
54            <td class="important"><?php the_sub_field('food_item');?></td>
55            <td class="new"><?php the_sub_field('new_dish_sign');?></td>
56            <td><?php the_sub_field('food_description');?></td>
57            <td class="chilli" ><?php the_sub_field('hot_sign');?></td>
58            <td class="veggie"><?php the_sub_field('vegetarien_sign');?></td>
59            <td class="important">£<?php the_sub_field('price');?></td>
60            <td><input class="numberinput"  type="number" name="quantity" min="0" max="99" value="0"></td>
61            <td><button>Add</button></td>
62        </tr>
63
64
65
66    <?php
67
68        endwhile;
69
70    else :
71
72        // no rows found
73
74    endif;
75
76    ?>
77
```

- Used php within editor to show my custom fields
- Broke it down and structured my generated HTML
- Applied classes to style generated HTML
- Made different templates for each page



The process (WWW)

Lets check out the current website

Link to remote site:
http://rkarim.raveweb.net/noodle-foodle-re-design/

Assessment

- Applied but not fully complete

- be **online** (not just on your computer)
- be **dynamic** (update-able via a CMS)
- be **responsive** (adapting to different screen sizes)
- be **accessible** (for people with disabilities and limited devices)
- be visually **cohesive** and **coherent** (consistency and connections)
- have **appropriately structured** information
- have a style informed by (but not necessarily following) contemporary trends

What's missing:

- Pages: account /checkout pages
- Addition CSS styling (Fonts, colours etc.)
- Bits missing from pages
- E-commerce / user account functionality

The Goal

- **Why Noodle Foodle**

  After seeing and using the website I didn't necessarily I saw a allot of room for improvement. I wasn't very experienced with coding and thought it would be a good place to start.

- **What have you *I taken away***
  - Greater knowledge of HTML and CSS (structuring my code and visual web pages)
  - Greater knowledge on Developing locally, hosting websites and FTP clients
  - Greater understanding of how to use php (ACF)

- **Taking it further**
  - Bits that are missing and incomplete
  - Funtionality proposed in wireframes not there
  - Put a bit more time into styling the website

- **What have I enjoyed**
  - Designing and developing wireframes
  - Understanding and using new tools/packages (Skeleton, ACF)

- **What did I struggle with**
  - jQuery creating functions myself and starting from scratch.
  - php again starting from scratch and creating my own functions.
